Institutional Distinctiveness:

Institutional Sensitivity towards Climate Change and Environment Concerns

A Project Displaying Institutional Distinctiveness: Rain Water Harvesting & Bore Well Recharge Project under Institutional Social Responsibility

Background:

Prof. Sambhajirao Kadam College is located in Deur in the northern area of Koregaon tehsil which is known for periodical droughts. Due to lack of assured irrigation facilities, farmers are mostly relied on rainfall and scanty bore well facilities created on their own. As a result, water table has been gone down up to 300 to 400 ft. More so, most of the bore Wells have run dry in the region. Besides, the region faces severe scarcity of drinking water; the conditions become even acute during summer. Owing to this, the projects like rain water harvesting, bore well recharge would improve the water table that would provide a sort of reprieve in dealing with the problem of water scarcity prevalent in the region.

Pilot project

The college was also facing a severe water scarcity problem especially during the summer. The bore well output was too short to fulfil the water requirement. Hence, the college decided to undertake the bore well recharge project by collecting the roof water.

Details of the project with water output before and after the recharge:

Water output before recharge	Water output after recharge
Daily 15 minutes	Daily 12 hours

Schematic diagram of the Model:

The cost for the college project was around Rs. 55000/- including roof water harvesting and recharge.

Reference data: The college has been implementing the Society outreach activities under the central government's flagship programme-Unnat Bharat Abhiyan since 2018. One of the prominent activities under UBA is conducting house hold survey of the five selected villages. As a part of the activity, the college has conducted the survey on the number of bore Wells with the present conditions as to water level, water output, locations etc.

Dahigaon Village : Dahigaon village is situated west of the Deur 3 Km away. This village also suffer periodical drought condition. Due to lack of assured irrigation facilities, farmers are mostly relied on rainfall and scanty bore well facilities created on their own.

Current Output	Daily 30 minutes	Daily 15 minutes
Estimated Output	Daily 7 hours	Daily 3 hours

3	Grampanchayat	17000 /-	Technical Guidance	14000/-	3000 /-

Future Plan:

Based on the encouraging results, the college decided to implement the project in remaining four villages, few bore Wells per village using reference data with the support and people's participation. Preference is given to the public utility bore Wells.
